

JOBSAGE — Developer Handover Pack (FINAL)

Option B: Candidate MVP + Institutional Portal v0 (Read-only pipeline)

Version 1.2 — 2026-03-16

This pack consolidates confirmed product decisions and provides build-ready requirements, backlog, and data contracts.

Attachments (provided separately): Rules workbook (example), Job role CSV contract template.

1. Confirmed Decisions (Build Constraints)

- **Regulators in MVP:** GMC + NMC + HCPC.
- **Institution visibility:** show both “Eligible now” and “Not yet eligible” candidates (with time-to-eligibility bands).
- **Institution candidate view:** anonymised but includes A) core professional summary, B) background context, C) CV-style summary.
- **Request contact:** notify both institution and candidate; candidate acceptance not required; request logged and routed via admin task.
- **Billing:** implement now with 3-day free trial; automatic entitlement expiry & upgrade flow.
- **Roles dataset:** curated dataset in MVP; CSV ingestion via admin.

2. Option B Scope

The platform remains a **pre-application decision layer**. Eligibility is determined by a deterministic rules engine using publicly available guidance and user-declared inputs, augmented by bounded AI recommendations and human review for edge cases.

2.1 Candidate MVP

- Account, consent, structured profile, optional document upload (not verified).
- Eligibility evaluation (Eligible / Not yet eligible / Ineligible) with explainability and rule version tracking.
- Role matching that filters out ineligible roles before viewing.
- Not Yet Eligible remediation plan with progress tracking.
- Human review queue for ambiguous cases.

2.2 Institutional Portal v0 (Read-only)

- Institution user login and RBAC.
- Pipeline view of opted-in candidates only (enforced by consent/visibility service).
- Filters: profession, specialty, eligibility status, time-to-eligibility band, location preference (if captured), sponsorship requirement.
- Candidate card shows anonymised profile summary + eligibility explanation and sponsorship label.
- Export anonymised CSV.
- Request contact → creates admin task; logs auditable event; notifies institution + candidate.

3. Billing & Entitlements

Billing must be implemented in MVP with a 3-day free trial. Access is controlled by entitlements.

- **Plans:** Individual (£180/yr), Premium Individual (£420/yr), Institutional (£5,000/yr).
- **Trial:** 3 days from first activation; trial can be once per account (recommended).
- **Entitlement gates:** access to advanced pathway intelligence, progress tracking depth, human review, and institutional pipeline features.
- **Post-trial behaviour:** lock premium features; keep basic account access and show upgrade prompts.

Implementation note: add an Entitlements service/table keyed by account_id + plan_id + status (trial/active/expired) + start/end timestamps.

4. Data Contracts

Use the provided templates to reduce ambiguity and accelerate development.

- **Rules workbook (example):** JOBSAGE_Rules_Specification_Workbook_v1_0_Example.xlsx
- **Job role contract:** JOBSAGE_Job_Role_Data_Contract_Template.csv

5. Architecture Additions for Option B

Core: API/Backend + Decision Orchestrator

- Rules Engine (versioned rulesets; deterministic)
- Visa/Sponsorship Service
- AI Recommender (bounded)
- Human Review Service (queue)
- Audit/Trace Service
- Profiles + Documents

Option B additions:

- Consent/Visibility Service (candidate opt-in and scope)
- Pipeline Service (institution read-only views; exports)
- Entitlements/Billing Service (trial + subscription gates)

6. Add-on User Stories for Option B

Institution portal stories I1–I5 and consent/visibility stories are required for Option B. See Kickoff Pack for sprint planning.
