

1) Sections are better to be in the below order-
probably suggested renames for some too:

Jobs & Applications

Opportunities (Job Opportunities)
My Application (Application Tracker)
Interview Calendar (Interview Schedule)
Inbox (Messages)

My Journey

My Dashboard (Progress Hub)
My Path (Career Path)

Profile & Compliance

My Profile (Personal & Professional Profile)
My Documents (CV & Supporting Documents)
Identity Verification (ID Verification)
My Eligibility (Eligibility Status)

Opportunity Enablers

Sponsor Licences Companies (Visa Sponsoring Employers)
Recommendation Letter (References)

Support & Preparation

Interview Prep (Interview Preparation)
Regulatory Guidance (Visa & Legal Guidance)

Insights & Tracking

My Report (Performance Report / Analytics & Insights)

Instead of the below because these are mixed. The above shows a particular flow:

My dashboard

My profile

My documents

My eligibility

Sponsor licences companies

Opportunities

My application

Inbox

My path

Interview prep

Interview calendar

Identity verification

Recommendation letter

My report

Regulatory guidance

2) Branding

- The overall branding colors are appealing; however, the darker shade should be adjusted to a much deeper red to strengthen visual identity and contrast.
- The JobSage logo (top left) needs to be larger and higher resolution to improve visibility and professionalism.
- For sections with extended background color, it would be more effective to use the darker shade to create consistency and visual depth.

3) Dashboard

- My PhD qualification is not displayed, this should be clearly visible on the dashboard. As if it is not parsing it.

- The dashboard should prominently display:
 - *Relevant opportunities
 - *Recommended jobs
- The process for progressing to the next stage (verification) is not clear. There should be a dedicated section for uploading official documents (e.g., passport, certificates) as part of a structured workflow.
- A chatbox with AI support should be integrated to answer user questions in real time.
- The dashboard currently feels crowded and somewhat repetitive. It should:
 - *Focus only on essential information
 - *Present a cleaner layout
 - *Visually represent the user journey, allowing users to unlock stages progressively
- By this stage, eligibility, roles, and opportunities should already display meaningful, dynamic data.
- When a user addresses an eligibility gap, the system should:
 - *Reflect the update
 - *Allow progression to the next step

Currently, this process feels static and unresponsive.

4) My Eligibility

- The section contains too much information and is somewhat confusing; it should be simplified and more intuitive.
- Introduce a multi-profile system:
 - *Users with diverse experience can create separate profiles (e.g., business development, teaching, academic leadership).
 - *Each profile should generate an AI-enhanced CV tailored to that role.
 - *The system should then match opportunities based on the selected profile.
- If a user has only one career focus, they can maintain a single profile.
- Verification should be recommended before applying, requiring:
 - *Passport
 - *Academic certificates
 - *Other relevant documents
- Once verified, users should be able to seamlessly begin applying.

5) Sponsor Licence Companies

- Company profiles still do not display contact details (email and phone number).
- CV sent toggle still does not send the cv I guess.
- It does not appear the candidate will get emails on the platform.
- They do not show the number of available vacancies per company.
- There should be a clear indicator at the top showing:
 - *Total opportunities linked to each company
 - *Also this shall appear on the dashboard and on opportunities and on eligibility

6) My Applications

- The My Applications section is not displaying any data, which needs to be addressed urgently.
