

Platform Feedback & Feature Ideas

Current Issues

Major:

- When I press send CV a CV must actually be sent. This must also show in applications and show in the reports.
- The AI shall recommend the closest 3 vacancies to my profile. When I apply, it shall point me to the next 3 I must apply to. Then next 3 then next..
- The SL companies must have a phone number and an email address very visible and contactable from inside jobsage.
- The SL companies must show the vacancies in a list if there are any not only they shall say they have 19 or 18 or 10. Then the candidate shall be able to apply for the job from jobsage. They will have the application all filled up based on their profile. They can then double check only. They also have a floating AI assistant that will help them in writing something new if the platform did not pick it up.
- When the candidate submits, the email comes to jobsage inbox. Then the interview comes in jobsage calendar. All this will be in reports.
- Reports also need to recommend the best 10 companies to apply for next. And explain why. It needs to give percentages on the closest match and be ready to explain why it is the best.
- Most importantly, the platform needs to talk to each other. Whatever changes in one place has to show and resonate in the other.
- Once the CV parsing is complete, candidates should have the option to manually add any missing information that may not have been captured from their CV.
- Job vacancies are still not visible on the Sponsor Licence (SL) page.
- While it is helpful that the Sponsor Licence page categorises companies by industry, it currently lacks functionality, as vacancies are not automatically posted.
- There is also no option for candidates to apply directly to roles from this page.
- The page indicates that it has not successfully synced with the live job listings, which limits its usefulness
- The platform is taking shape but it still lacks:
 - + Reliable job visibility and application functionality
 - + Accurate CV parsing and profile completion tools
 - + Intelligent matching and guidance for candidates
 - + Focusing on verified candidates, a niche market entry
 - + Writing the applications from the saved profile
 - + Also candidates when they are working at a company, they can ask their employers to write them a recommendation letter that they can keep verified on their profile as a reference.

The candidate enjoy a platform that revolves around them, their needs, their expertise, their qualifications, their CPD certifications and get them opportunities directly personalised to

them. A complete end-to-end journey could significantly increase value for both candidates and employers.

Dashboard:

- Documents, eligible roles, applications, plan progress: Documents goes to documents which is okay. Eligible roles go to opportunities and applications go to opportunities which shouldnt be the case. Plan progress goes to my path. I think that Eligible roles shall go to eligibility and opportunities shall go to opportunities. My applications are inside opportunities so there is no need to have that separate. Also opportunities are the sponsor liscenced companies so I also think that this is repetitive. Opportunities can be instead of my applications as opportunities has my applications inside it.
- Candidate Career Journey (Each stage will be in grey until it is completed. Then it lights up and the other stage unlocks-like a game)

1. Profile Completion and Verification (Upload and parse CV)

Manually edit/add missing details

Add qualifications, experience, and preferences

Complete identity verification (passport + face match)

Profile strength indicator (%)

2. Eligibility & Compliance

Check visa eligibility (country + role-based)

Upload required documents (passport, certificates)

Qualification verification

Regulatory requirements (e.g. NMC for nurses)

Compliance checklist with progress tracker

3. Career Matching

AI-powered job matching

Match score (%) for each role

Recommended “Best First Applications”

Skill gaps identified

Suggested improvements to increase match %

4. Applications

Apply directly to roles

Track application status (Applied → Reviewed → Interview)

Save/bookmark jobs

“1-click apply” for verified profiles

Employer views & interest notifications

5. Interview Preparation

Interview scheduling

Mock interviews (AI or live)

Role-specific preparation (e.g. OSCE for nurses)

Feedback and improvement tips

Interview status tracking

6. Offer & Placement

Receive and review job offers

Contract overview and guidance

Accept / decline offers

Employer onboarding steps

7. Visa Processing

Step-by-step visa guidance

Document submission tracker

Sponsorship handling

Timeline and status updates

Alerts for missing items

8. Relocation & Onboarding

Relocation checklist (housing, travel, etc.)

Employer onboarding tasks

Arrival support guidance

Integration resources (local info, banking, etc.)

9. Training & Upskilling (Optional but Integrated)

Required certifications (e.g. OSCE training)

Platform courses + mock exams

Employer-linked training pathways

Progress tied to job readiness

10. Career Growth & Insights

“Journey Readiness Score” (overall progress %)

CV performance analytics (views, clicks)

“Advertise My CV” feature (premium visibility)

Recommendations for next career steps

Upskilling suggestions

Key UX Enhancements

Progress Bar: “You are 45% complete → Next: Apply to jobs”

Smart Guidance: “You should apply to these 3 roles first”

Readiness Score: Combines profile, compliance, and job fit

Milestone-Based Design: Each stage unlocks the next

Transparency: Always show *what’s missing and why*

Example Journey Flow (Simple View)

Profile → Verification → Compliance → Matching → Applications → Interviews → Offer
→ Visa → Relocation → Start Job (Icon of Trophy or Success)

This structure makes the platform feel like a guided pathway, not just a job board.

Profile:

- My profile shall also have an icon on top right where I can add my picture and personalise it.
- In the profile, we can also add when they want to start the job. This is essential to know.

Documents:

- My Documents shall include my CV, my qualifications, CPD certifications, my recommendation letters, my verified address, my passport.
- After the CV and all other documents are parsed, candidates should be able to manually add any missing or incorrectly extracted information. At the moment, there is no clear way to do this.
- Candidates shall be able to add their qualifications to be verified and shall be able to verify themselves by adding their identity card and their proof of address probably. This will render the platform a verified user database. Proof of address will be used to sort the candidates per region for later use by employers. So candidates start with a profile, parse their CV, add their documents and verify their identity and qualifications.

Eligibility:

- Looks complicated. We need to make it look simple. On eligibility you will need to see vacancies you are eligible for and those you can be eligible if you acquire a particular training or certification with the timeline for that. So this shall come from the vacancies that are found on the jobboards and the websites of employers. the platform shall be able to tell what are the closest vacancies matching to the profile of the candidate.

Sponsor Licence:

- Job vacancies are still not visible on the Sponsor Licence (SL) page. All vacancies must be visible for each of the companies. So, there shall be a list of vacancies. When I press check vacancies, I need to see the number of vacancies and the list of vacancies too. Then I click each and see details. All shall be on jobsage. I shall be able to apply to vacancies from inside jobsage using the AI feature that would assist them in writing an answer to each question in the application. The AI assistant will help them write the answer directly on the job application. Once submitted, jobsage shall show congrats.. Etc..
- While the SL page usefully categorises companies by industry, it is limited because:
 - It does not automatically display live job vacancies.
 - There is no direct way to apply for jobs from this page.

- The system indicates that it has not been able to sync with the live vacancy list.
- The candidate needs to have a calendar where the interviews are scheduled.
- All activity on applications and interviews and offers must show on the platform.
- For instance, there has to be an inbox inside the platform for replies from employers and a calendar for scheduling an interview. Also an offer is made on the platform too and is accepted and rejected on the platform.
- There will also be a solicitors on the platform once the offer is accepted. Then the application for the visa will light up. Then we will have also real estate people for the accommodation for relocation. Again, this will only light up if there is an offer provided. So each stage will be in grey and then will light up when it is completed.
- When we press send CV, it must show in application or as a cv sent. It does not at the moment.
- **When the candidate wants to apply to a specific job, all information about his/her profile and parced data and cv and qualifications and experience etc.. All will be used by AI to fill the application document. The candidate will open the application and will start seeing it all being filled by itself from the information he/she input already. Then candidate will amend if necessary. The whole application will use the data inserted to answer all questions on the applicaiton. Submission then is done. Reply will come to the email on jobsage in jobsage inbox and not to the personal email of the person. (VIMP)**

Opportunities:

- The “Opportunities” section is not functioning properly:
 - It shows an error (“cannot load opportunities”).
 - Vacancies exist but are not displayed on either the dashboard or the opportunities page.
- The platform does not currently guide candidates on where to apply first or which roles are the best match.
- There is no matching score or percentage to indicate how closely a candidate fits a role.

My Path:

- In the “My Path” section:
 - The system failed to recognise an existing PhD and incorrectly prompts the user to obtain one.

My path shall show that stage completion (example: jumping from one island to another and unlocking treasures) Their ultimate goal is to get a job. Their stepping stone goal is to get an interview. They can earn badges on the way. Also hey can have extra badges for CPD courses they do, for new qualification they take. Etc..

Generic Product & Feature Ideas

*We need to see the super admin account where we can solve anything needing a human and see all subscribers and need to login from the employer view as well.

Additions Needed:

1. Verified Candidate Database

- We introduce a system where candidates can verify their profiles by:
 - Uploading a passport copy.
 - Completing a facial verification check.
 - Submitting qualifications for verification.
- A verified database increases trust and overall platform value.

2. Candidate Self-Marketing

- We allow candidates to actively promote themselves:
 - Share their profiles directly to job boards and LinkedIn.
 - Add a feature such as “Advertise My CV” (paid option).
 - Show analytics (e.g. who viewed or shortlisted their CV).

3. Niche vs. Broad Strategy

- I am thinking if it is better to consider starting with a focused niche (e.g. nurses):
 - High demand and large talent pool.
 - Easier to build traction and credibility.
- Expand to other industries once the model is proven.
Not sure about this for now. We need to discuss it to decide. Because SL companies divided by industry is also a very attractive thing for other industries and is very helpful. So we need to discuss that.(tentative)

4. Training Integration

- If we focus on nurses for instance, we provide built-in training pathways:
 - Example: OSCE preparation course with mock exams for nurses.
 - Candidates can upskill directly on the platform before applying.
- We can partner with Sponsor Licence companies to deliver training that leads directly to employment.

5. End-to-End Journey

- We must build a complete candidate journey within the platform:
 - Training

- Job application
- Employment
- Visa processing
- Relocation support
- This must be presented as a clear step-by-step process.

6. Smart Matching & Guidance

- We need to introduce:
 - Match percentages for each role.
 - Recommendations on where to apply first.
 - Prioritisation based on highest success likelihood.

7. Journey Readiness Score

- We create a “readiness score” to indicate how prepared a candidate is for applying.
- This helps candidates understand what they still need to complete.

We can provide a Digital Career Passport

A single verified professional profile that can be used everywhere, giving employers confidence in your credentials and helping you stand out from other candidates.

Your Digital Career Passport includes:

- CV
- Certificates
- Employment History
- References
- Skills Assessment
- Video Introduction
- Identity Verification
- Visa/Sponsorship Status

Also, an Employability Score

Receive a comprehensive Employability Score that measures your readiness for the job market and highlights areas for improvement. The score helps you understand your strengths and identify the qualifications, skills, or training needed to increase your chances of success.

The candidates also get a Match Score for the Best Jobs

Our intelligent Match Score connects you with the most suitable job opportunities based on your qualifications, experience, certifications, skills, and career goals, helping you focus on roles where you have the highest likelihood of success.

Verification, Promotion, and Career Development

I am thinking for just £49, receive:

- A Verified Professional Profile
- An Employability Score
- An Employer Promotion Package

This all-in-one solution combines:

- Verification
- Employability Scoring
- Candidate Promotion
- Training Improvements

Ideas & Opportunities for Improvement:

- A strong added value would be to build a verified candidate database where users can market themselves. This could include:
 - Identity verification (e.g., passport upload and facial match)
 - Qualification verification
 - Profile validation to ensure credibility
- Verified candidates could then actively promote themselves through the platform by:
 - Applying to job board listings
 - Connecting with employers via platforms such as LinkedIn
- As the database grows, especially within a specific sector, it could become highly attractive for employers, encouraging them to subscribe to access talent.
- There is also a strategic consideration around whether to:
 - Focus initially on a single niche (e.g., nursing, due to high demand and large candidate pool), or
 - Build a platform that caters to multiple industries from the outset
- If focusing on a niche such as nursing, the platform could offer:
 - OSCE preparation courses
 - Mock exams
 - A clear pathway from training to job application
- To maximise value, the platform should aim to provide an end-to-end solution, covering:
 - Training and preparation
 - Job application and placement
 - Visa processing

- Relocation support
- This process should be clearly structured into step-by-step stages for ease of use and clarity for candidates.

Overall, the goal would be to create a comprehensive, trusted ecosystem that supports candidates from preparation through to employment and relocation, while also delivering strong value to employers.
